```

# Below is an executed example!

Hypothesis Testing - Critical Value Method

```

Enter population standard deviation (sigma): 60
Enter hypothesized population mean ( $\mu_0$ ): 500
Enter sample mean ( $\bar{x}$ ): 485
Enter sample size (n): 36
Enter significance level (alpha): 0.05

```

```

Select test type:
1. Two-tailed test ( $H_1: \mu \neq \mu_0$ )
2. Right-tailed test ( $H_1: \mu > \mu_0$ )
3. Left-tailed test ( $H_1: \mu < \mu_0$ )
Enter choice (1/2/3): 3

```

```

Results:
Test: Left-tailed
z_critical: 1.6448536269514722
LCV: 483.5514637304853
xbar: 485.0

```

Decision: Fail to Reject H<sub>0</sub>
